Thirty Varieties

Mrs. Bullard's New Hybrid Watsonias

The largest collection in the world

The Hybrid Watsonia is a new flower originated in California.

For the production of these wonderful hybrid watsonias the world is indebted to the skill and the perseverance of the late Mrs. J. H. Bullard of Los Angeles, who spent nearly 20 years hybridizing and selecting these flowers, until they are now produced in an endless number of beautiful shades. Starting in with only two colors, orange scarlet and white, she has produced between 40 and 50 new shades, some of the choicest of which are offered in this catalogue.

The watsonia is closely related to the gladiolus but grows much taller, reaching a height of from 3 to 6 feet. While the flowers are smaller they are produced in far greater numbers, and are more delicate and graceful both in color and form.

After the main spike has blossomed, several smaller side spikes are produced, and it is quite common to have a total of 50 to 60 flowers on a single stem. Thus the flowers appear over a much longer period than gladiolus and make a grand display in the garden. The long stems and graceful airy arrangement of the flowers makes the watsonia particularly desirable as a cut flower.

Plant the bulbs from end of August to early part of November in any good garden soil, placing them 8 to 10 inches apart and about 5 inches deep in light soils or 4 inches deep in heavy soils. The plants will bloom the following spring.
